WEEK 10 / TESTING & QUALITY ASSURANCE

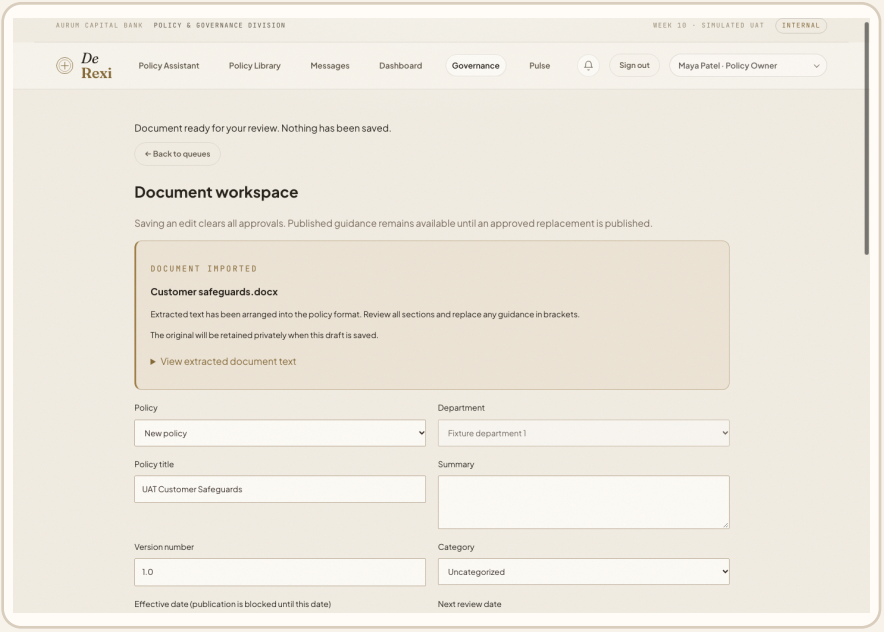

A TESTED MVP.

A CLEAR RELEASE BOUNDARY.

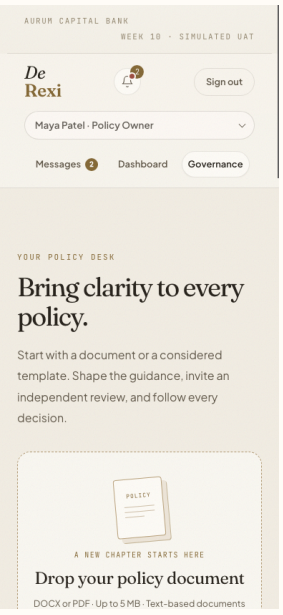

Unit and integration testing, simulated user acceptance, defect correction and regression verification for the DeRexi policy governance platform.

379 CHECKS PASSED

0 failed / 7 live workflow checks pending

01 Document intake / simulated workflow

02 390px mobile

Disposition: Fixture-tested MVP completed for the Week 10 coursework scope. Seven integrated workflows passed isolated checks; live equivalents were not executed. Human stakeholder acceptance remains pending.

Evidence date: November 10, 2026. All UI screenshots in this report are explicitly simulated/fixture evidence, not production records or live banking approvals.

VERIFICATION / TEST INVENTORY

379 executed checks. Zero failures.

Week 10 results combine targeted integration checks and re-executed relevant regression suites. Earlier Week 7-9 results not rerun here remain historical context.

SUITE	PASS	FAIL
Cross-component integration & security	42	0
Governance lifecycle	102	0
Document parser & intake	47	0
Pulse units / cache / normalization	97	0
Publisher-source audit (executed)	54	0
Desktop & mobile browser UAT	37	0

INTEGRATION VERIFICATION

7 of 7 specified feature handoffs passed in isolated FastAPI/SQLite and browser fixtures; 7 of 7 live counterparts remain blocked or unexecuted. Browser coverage included a verified 390 x 844 emulated mobile viewport, not physical devices.

Test environment: Disposable SQLite with real API and ORM handlers, mocked Supabase/provider transport, synthetic JWTs, deterministic Pulse feed, and native macOS document extraction. No live Supabase read/write or production HTTPS test was performed.

Seven cross-feature handoffs

The core customer and policy-owner paths were exercised as connected workflows, not just standalone screens.

01 **Assistant to Messaging**

Uncertain answer creates a clarification thread; admin triage, owner reply and requester notification work.

02 **Draft to publication**

Document draft moves through independent department peer review and System Admin approval into the Library.

03 **Pulse to revision**

A cited regulatory-source record starts a working revision; published baseline stays available.

04 **Feedback to policy health**

Helpful/unhelpful actions persist and update scoped dashboard counts without duplicate records.

05 **Incident reporting to triage**

Authorized administrator assigns/escalates; Employee and Policy Owner changes are denied.

06 **Sign-in / out to permissions**

Synthetic BFF cookie sessions enforce role navigation and protected API boundaries.

07 **Upload and preview to draft**

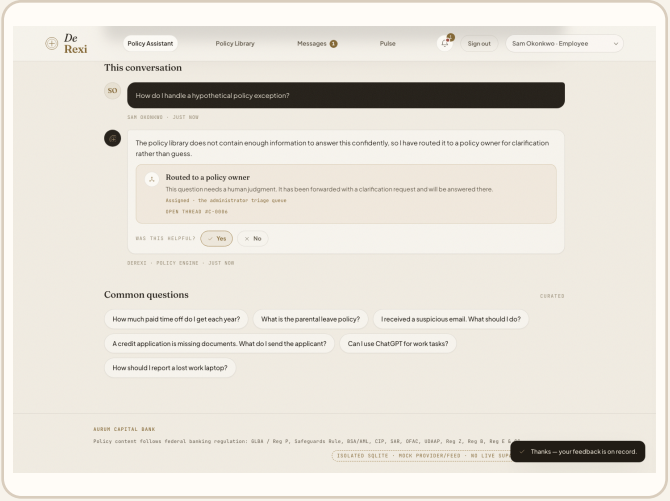

Real DOCX parsing, author confirmation and private-original workflow exercised locally.

Important: Simulated passage does not validate PostgreSQL migration behavior, RLS, concurrent transaction locking, real login, provider-fed data quality, or end-to-end live operation.

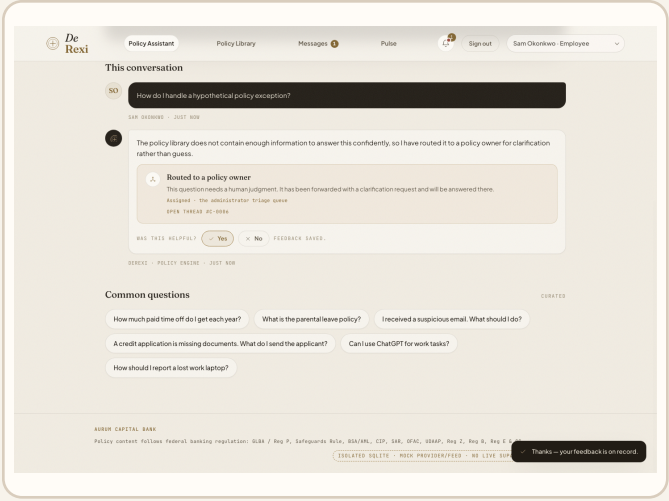

DEFECT RESOLUTION / PROOF OF REPAIR

Three confirmed defects. Three fixes.

QA identified functional correctness and trust issues; Codex repaired and retested the specific affected paths.

BEFORE / FALSE SUCCESS MESSAGE

AFTER / PERSISTED FEEDBACK

W10-01 HIGH

Feedback claimed successful saves without calling the API. Fixed authenticated persistence, in-flight state, confirmation, error/retry and single-row rating updates.

W10-02 HIGH

Pulse accepted spoofed publishing hosts under official labels. Added exact host allowlists, narrowed FDIC bulletin path validation and rejected deceptive hosts/ports.

W10-03 MEDIUM

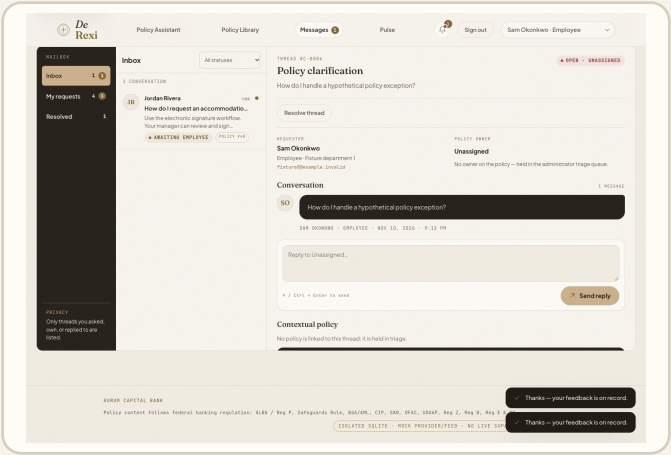

Feedback accepted user questions as answers, contaminating helpfulness totals. Enforced DeRexi answer ownership and sender validation; invalid requests now return HTTP 422.

Evidence: Original failures and corrected retests are retained in the Week 10 bug log and test attempts. The final suites pass, but prior failed attempts are not erased or counted as current test failures.

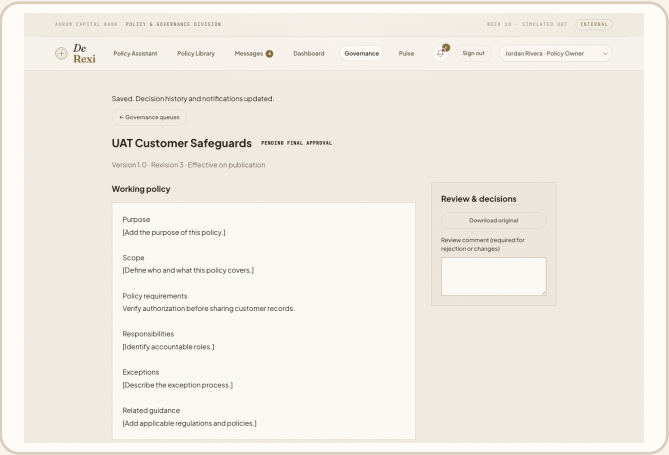

SIMULATED USER ACCEPTANCE / VISUAL EVIDENCE

Realistic roles. Controlled data.

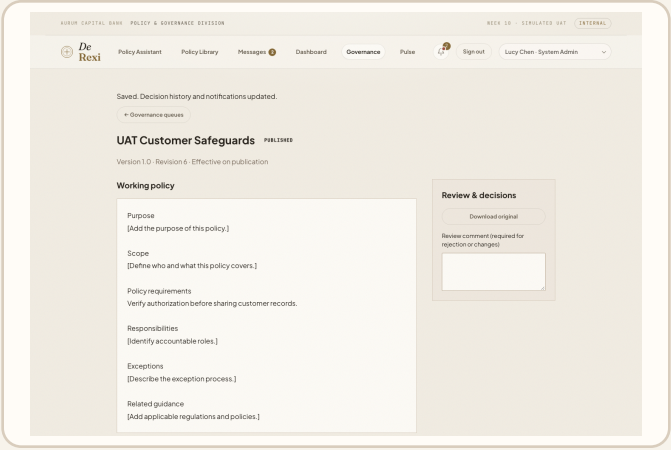

Agent-executed UAT demonstrated Employee, two independent Policy Owner and System Administrator journeys in a fictitious environment.

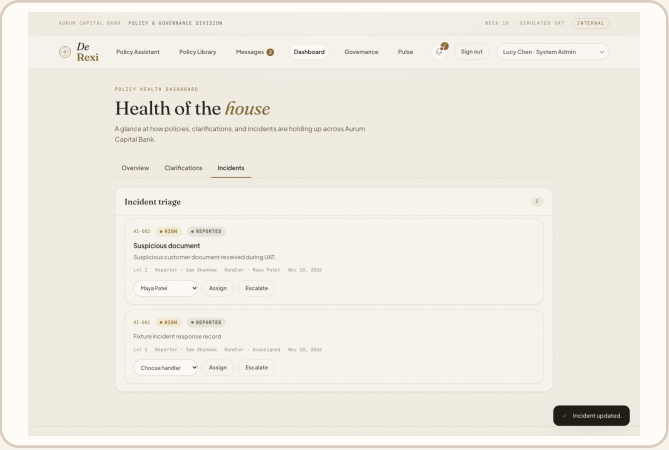

EMPLOYEE / MESSAGE THREAD

POLICY OWNER / PEER REVIEW

SYSTEM ADMIN / PUBLICATION

SYSTEM ADMIN / INCIDENT TRIAGE

ACCEPTANCE EVIDENCE

Desktop Chromium 1440 x 1000 and emulated mobile 390 x 844 were exercised, including touch navigation, error handling, unauthorized actions and logout. Screenshots 01-15 were labeled simulated fixtures. No human stakeholder sign-off, physical-device test or full accessibility audit is claimed.

MVP DISPOSITION / OPEN RELEASE GATES

What remains before release

The Tested MVP is ready for coursework review; production deployment is not approved or verified.

LIVE WORKFLOWS

Seven integrated journeys require real provider/database verification after a separately approved activation.

AUTH / GOVERNANCE DATA

Provider identities, live HTTPS, Governance tables and additional owner coverage are not yet activated.

RLS / DIRECT-CLIENT ACCESS

Previously observed permissive direct Data API grants and an RLS-bypass-capable backend role require review and tests.

INFRASTRUCTURE / RELIABILITY

Encryption/backup evidence, durable logging, worker-affinity and recovery, PostgreSQL locking/retrieval, native Windows/Linux parser execution remain open.

HUMAN ACCEPTANCE

Stakeholder UAT sign-off, physical iOS/Android and broader accessibility/cross-browser testing remain pending.

FINAL STATUS / TESTED MVP IN DEVELOPMENT SCOPE

379 pass / 0 fail; all seven isolated handoffs pass. Three confirmed bugs fixed and retested. Live integration and human acceptance remain pending. No production data, Auth users, RLS rules, migrations or grants changed.
