Compliance 1 Final Project Submission

There are the expectations for the final project for this course

Posted Thu Oct 8, 2026 at 6:27 pm

Criteria	Grading Scale	
Compliance Fundamentals The project must demonstrate understanding of regulatory frameworks through practical application to their chosen organization. Students must identify applicable regulations for their selected business scenario using two major frameworks (PCI DSS, HIPAA, GDPR, SOX, etc) with proper regulatory terminology. Create a compliance requirements analysis document using templates with business process mapping. Develop a basic compliance program plan including organizational roles, responsibilities, and implementation timeline. Document two basic compliance controls with implementation procedures and testing methods.	**1** Complete	**0** Incomplete
Compliance Program Development The project must include creation of compliance program structure and operational procedures for their chosen organization. Design program governance model with communication strategy and stakeholder identification using organizational charts. Write one comprehensive compliance policy following standard templates with approval workflow and version control procedures. Create detailed procedural documentation for one compliance process including implementation steps, testing protocols, and validation procedures. Develop a compliance training plan with content outline, delivery methodology, and assessment approach with evidence of training design.	**1** Complete	**0** Incomplete
Compliance Auditing Basics The project must demonstrate auditing skills through practical audit planning and execution for their selected organization. Create an audit plan for one compliance area including scope definition, methodology, timeline, and resource requirements. Collect and document evidence for three compliance controls using proper procedures including evidence types, collection techniques, and documentation standards. Perform compliance assessment using testing methodologies and document findings with gap analysis. Create remediation plan with prioritized recommendations, implementation timeline, and progress tracking methods.	**1** Complete	**0** Incomplete
Documentation & Reporting The project must include creation of professional compliance documentation and reporting systems for their chosen organization. Create documentation package using standard templates with version control and distribution procedures. Produce compliance status report suitable for management including executive summary, key findings, and recommendations with professional formatting. Set up record management procedures with retention schedules and access controls. Implement basic monitoring system with key performance indicators and reporting framework.	**1** Complete	**0** Incomplete
Legal & Ethical Implementation The project must demonstrate research and application of legal and ethical requirements for their selected industry. Research and document legal requirements using proper sources with compliance obligations matrix and regulatory citations. Apply ethical framework to compliance scenario including decision-making process and rationale documentation. Conduct compliance risk assessment using standard methodology with risk identification, impact analysis, and treatment recommendations. Document one compliance incident scenario using standard procedures including classification, reporting, and follow-up actions.	**1** Complete	**0** Incomplete
