WEEK 08 / ADMINISTRATOR DASHBOARD

Governance, built for decisions.

Policy creation, peer review, administrator sign-off and publication - demonstrated in an isolated development environment.

01 / ROLE-BASED GOVERNANCE

Policy Owner queue, drafts and review pipeline; illustrative fixture data.

IMPLEMENTATION AT A GLANCE

Independent approval

A second owner within the department reviews the author's work.

Administrative sign-off

A separate System Administrator gives final approval.

Controlled publication

Approved versions are released on or after their effective date.

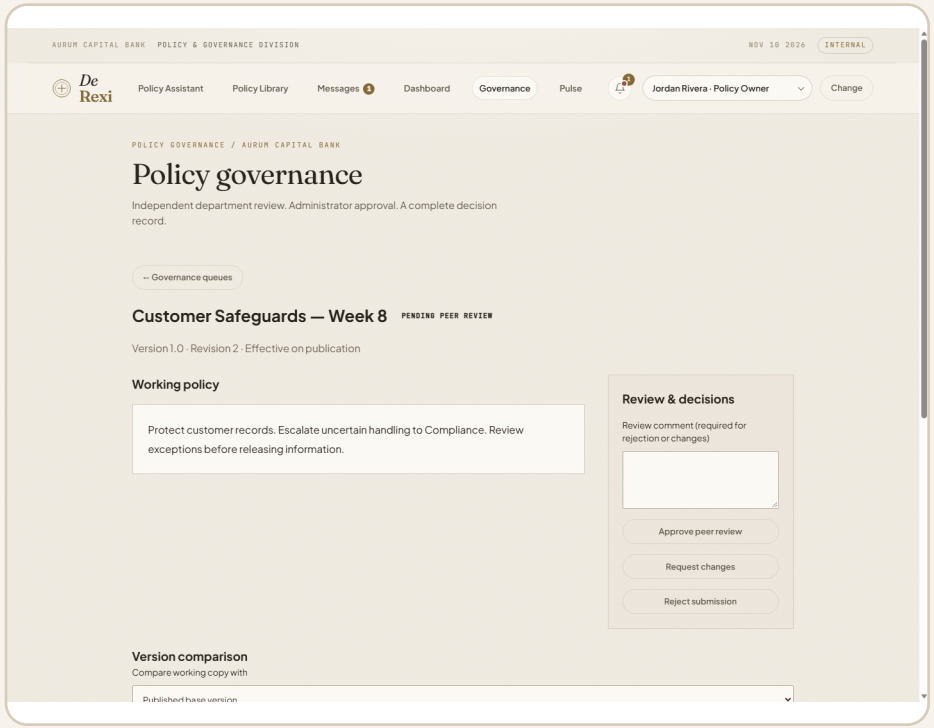

Audit continuity

Working copies, decisions and publication history are retained.

REVIEW PATHWAY

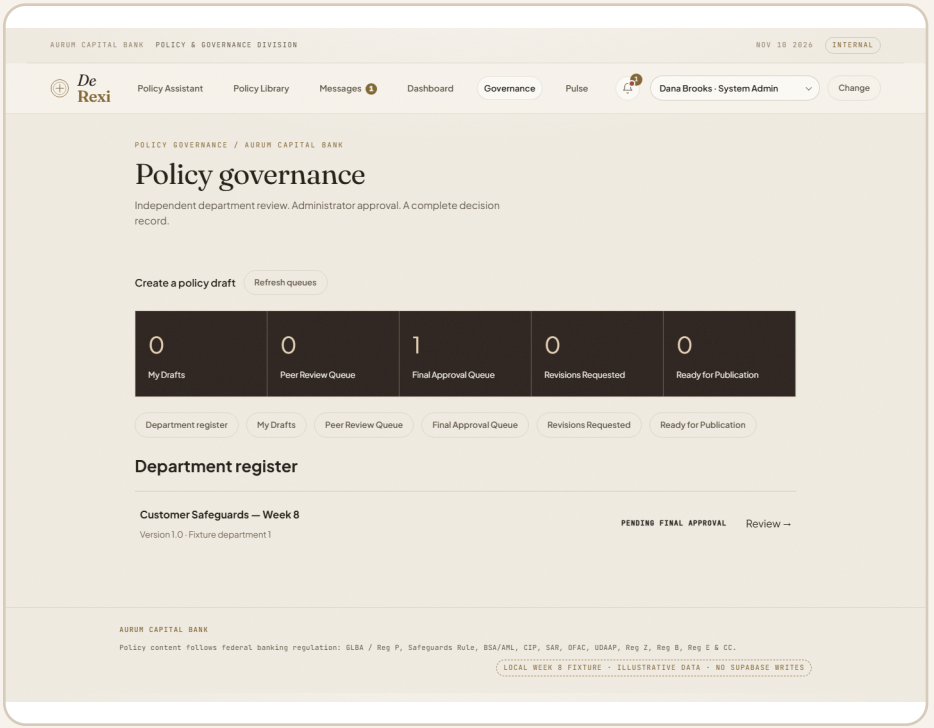

Independent checks, then release.

A drafted policy moves through peer review, final administrative approval and a separate publication action.

02 / PEER REVIEW

Reviewer can approve, request changes or reject; self-approval is blocked.

03 / ADMINISTRATOR QUEUE

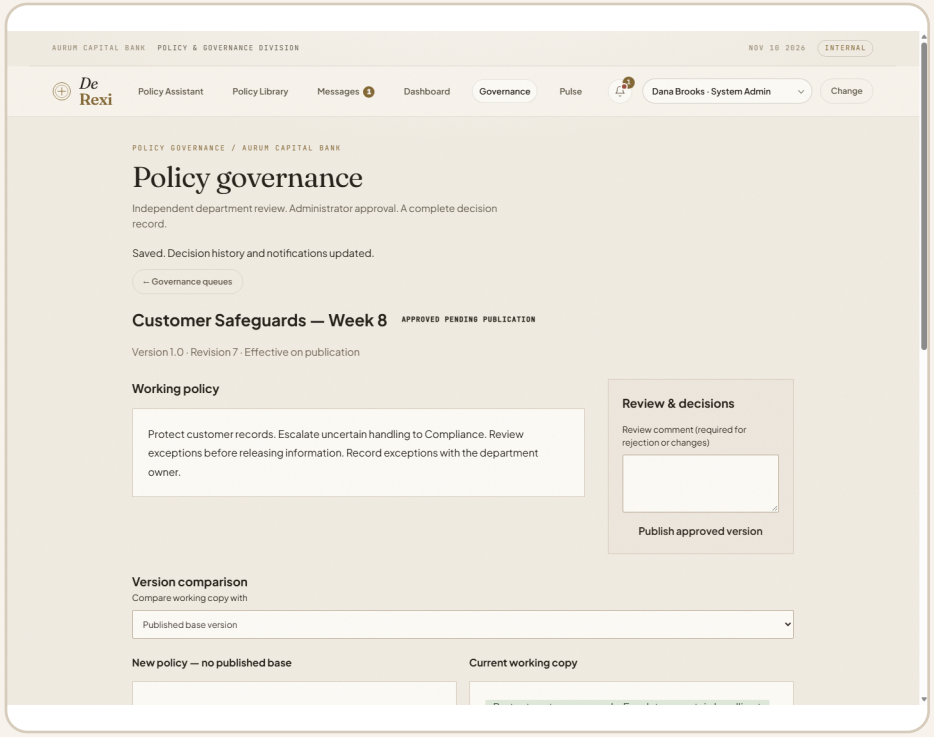

Final approval queue is restricted to authorized administrators.

Decision integrity: editing an approved draft invalidates earlier approvals. Comments are required when requesting changes or rejecting a submission.

PUBLICATION & RECORD

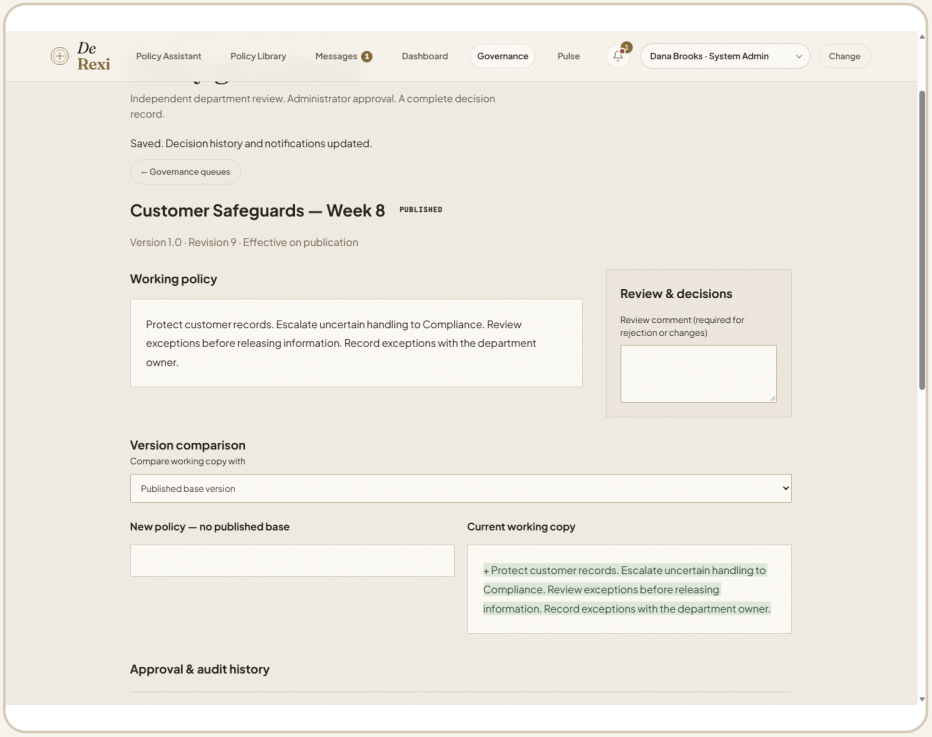

From approved to accountable.

Separate publication controls preserve version history and the reasons behind decisions.

04 / PUBLICATION

Administrator-controlled release; effective-date rules are enforced.

05 / HISTORY

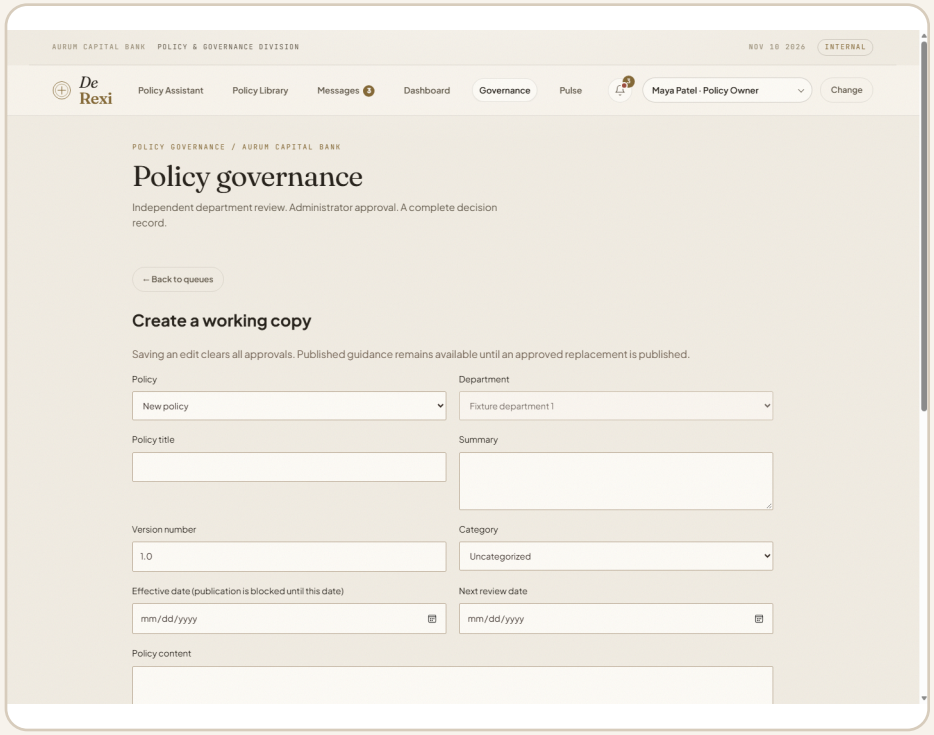

Decision timeline and governance actions recorded for traceability.

Demonstrated results: publishing an approved policy, immutability of a published working copy, and a rollback that preserves records after an injected transaction failure.

CONNECTED CAPABILITIES

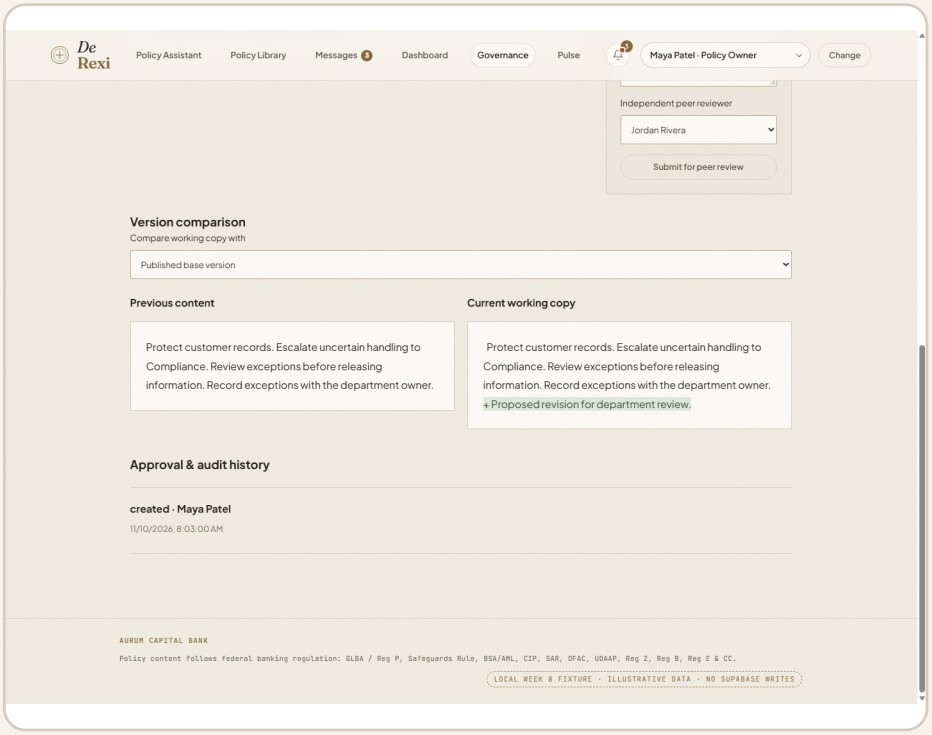

Pulse informs. Governance acts.

Regulatory developments can initiate a sourced working copy without auto-approving or auto-publishing policy.

06 / PULSE SOURCE

Source context is retained while policy changes remain human-reviewed.

07 / VERSION COMPARISON

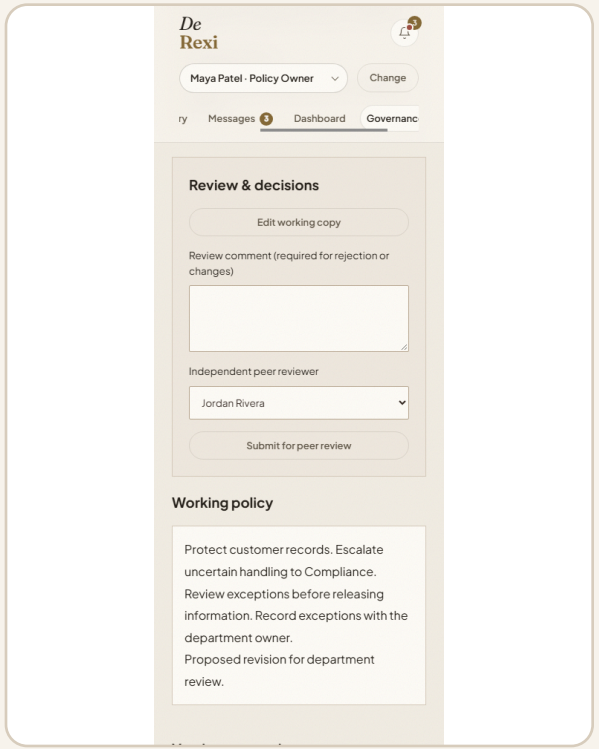

Published baseline stays available during proposal and review.

A revised version follows the same independent approval route. The current published version remains available until the replacement is authorized for publication.

ROLE-BASED EXPERIENCE

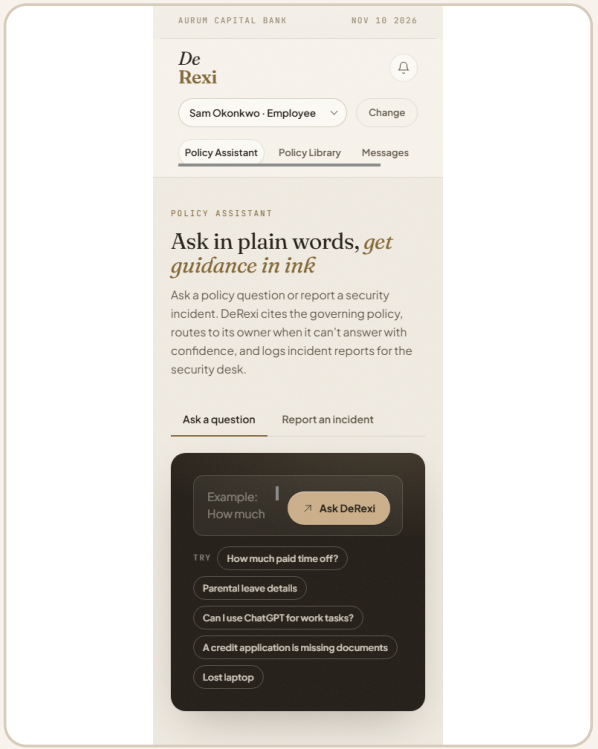

Right access. Right workspace.

The responsive Governance experience aligns to DeRexi's ivory, espresso and champagne visual identity.

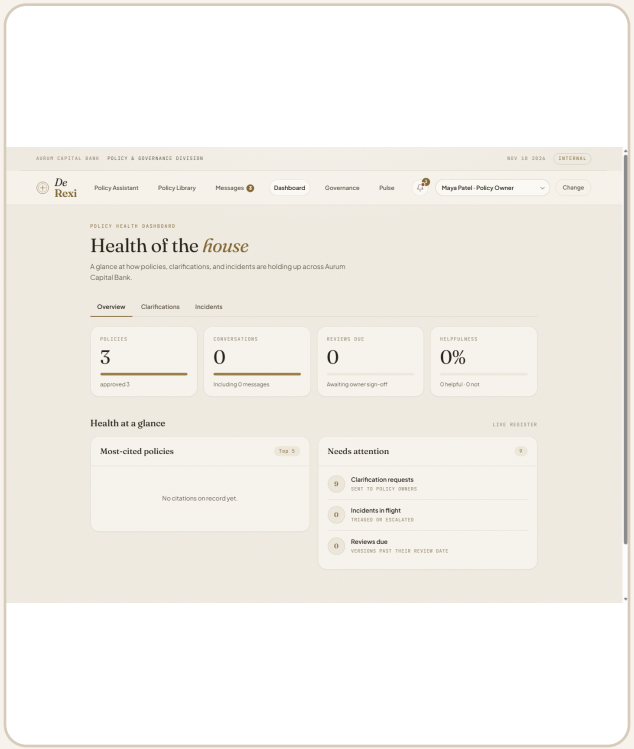

08 / MOBILE REVIEW

Narrow-screen reviewer workspace.

09 / EMPLOYEE BOUNDARY

Standard users do not see the protected tabs.

10 / DASHBOARD

Existing Policy Health renamed Dashboard.

Also demonstrated: Week 7 notification deep-links into Governance review, and employee access to Dashboard and Governance is denied by authorization checks.

EVIDENCE & REMAINING WORK

Implemented locally. Rollout pending.

Verification is based on the supplied logs, JSON outcomes, screenshots, and read-only inventory.

Policy lifecycle & access control	**102 pass / 0 fail**
Existing regression suites: Week 7 + Pulse	**223 pass / 0 fail**
Browser workflow and responsive layouts	**20 pass / 0 fail**
TOTAL FINAL CHECKS	**345 pass / 0 fail**

DATABASE & PRODUCTION LIMITATIONS

- Live Supabase migration and the additive seed of eight fictional Policy Owners were prepared, not executed.
- PostgreSQL migration, locking, RLS behavior and seed repeatability remain unverified in deployment.
- Production browser sign-in is not implemented; automated scheduling is not included.
- Browser and workflow captures use illustrative local fixtures, not proof of live Supabase writes.

SUBMISSION STATUS

Week 8 application implementation and isolated verification complete. Live database activation and end-to-end production testing remain outstanding.
